Degree: B.E - CSE

NeoColab_REC_CS23231_DATA STRUCTURES

REC_DS using C_Week 2_COD_Question 1

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

1. Problem Statement

Your task is to create a program to manage a playlist of items. Each item is represented as a character, and you need to implement the following operations on the playlist.

Here are the main functionalities of the program:

Insert Item: The program should allow users to add items to the front and end of the playlist. Items are represented as characters. Display Playlist: The program should display the playlist containing the items that were added.

To implement this program, a doubly linked list data structure should be used, where each node contains an item character.

Input Format

The input consists of a sequence of space-separated characters, representing the items to be inserted into the doubly linked list.

The input is terminated by entering - (hyphen).

Output Format

The first line of output prints "Forward Playlist: " followed by the linked list after inserting the items at the end.

The second line prints "Backward Playlist: " followed by the linked list after inserting the items at the front.

Refer to the sample output for formatting specifications.

Sample Test Case

```
Input: a b c -
Output: Forward Playlist: a b c
Backward Playlist: c b a
Answer
#include <stdio.h>
#include <stdlib.h>
struct Node {
char item;
  struct Node* next;
  struct Node* prev;
}:
// You are using GCC
void insertAtEnd(struct Node** head, char item) {
 struct Node* newNode = (struct Node*)malloc(sizeof(struct Node));
 newNode->item = item:
 newNode->next = NULL;
 newNode->prev = NULL;
 if(*head == NULL) {
   *head = newNode;
    return;
```

```
struct Node* temp = *head;
     while(temp->next != NULL) {
         temp = temp->next;
       temp->next = newNode;
       newNode->prev = temp;
     void displayForward(struct Node* head) {
       //type your code here
       struct Node* temp = head;
ινULL) {
cultt("%c ", temp->i
temp = temp->next;
}
       while (temp!= NULL) {
          printf("%c ", temp->item);
     void displayBackward(struct Node* tail) {
       //type your code here
       struct Node* temp = tail;
       while (temp != NULL) {
          printf("%c ", temp->item);
         temp = temp->prev;
       }
     }
     void freePlaylist(struct Node* head) {
     type your code here
       struct Node* temp;
       while( head != NULL) {
         temp = head;
         head = head->next;
         free(temp);
       }
     }
     int main() {
       struct Node* playlist = NULL;
       char item:
                                                                                  240701506
       while (1) {
         scanf(" %c", &item);
         if (item == '-') {
```

```
240701506 break;
                                                      240701506
         insertAtEnd(&playlist, item);
       struct Node* tail = playlist;
       while (tail->next != NULL) {
         tail = tail->next;
       }
       printf("Forward Playlist: ");
       displayForward(playlist);
displayBackward(tail);
       printf("Backward Playlist: ");
       freePlaylist(playlist);
       return 0;
     }
                                                                          Marks: 10/10
     Status: Correct
